Destra

This is a folding and gluing machine with a twin letterpress creasing device.

Comprising:

A rising pile feeder, adjustable side register belt, two independent creasing heads using standard creasing rule (one up, one down) second registration belt and a five plate folding section. The machine is designed to avoid cracking of full-colour laminated / varnished finished work that should be folded.

Some examples of work:

- Book covers with flaps
- Covers for magazines
- Office files
- Greeting cards
- Maps
- Zig zag creasing and folding
- Gate folding
- Digitally printed work where “creasing” is a problem
